Press Release

American Electric Power (AEP) chooses Teledyne Monitor Labs (TML) to replace Data Acquisition Software

Teledyne Monitor Labs to install its RegPerfect[®] Data Acquisition and Reporting Software at 41 American Electric Power Generating Stations across the United States.

Englewood, CO, May 9th, 2011: Teledyne Monitor Labs announced today that it has been chosen to replace the Continuous Emission Monitoring Data Acquisition and Reporting Software at all **American Electric Power** fossil fuel fired generating stations. AEP ranks among the nation's largest generators of electricity, owning nearly 38,000 megawatts of generating capacity in the U.S. In addition, AEP also owns the nation's largest electricity transmission system.

Teledyne Monitor Labs, with locations in Englewood, CO and Gibsonia, PA, is a leading supplier of environmental monitoring instrumentation and software for the measurement and reporting of combustion formed air pollutants. The company's RegPerfect data acquisition software, built on a platform of Microsoft[®] products, is fully featured including flexible report generation and data analysis. RegPerfect is fully compliant with all U.S. and Canadian Federal and State/Provincial regulations and is installed in hundreds of locations worldwide. Visit TML's website at www.teledyne-ml.com

Teledyne Monitor Labs is business unit of Teledyne Technologies, a leading provider of sophisticated instrumentation, digital imaging products and software, aerospace and defense electronics, and engineered systems. Teledyne Technologies' operations are primarily located in the United States, Canada, the United Kingdom and Mexico.
